CERT-In Advisory CIAD-2025-0025

Multiple Vulnerabilities in Microsoft Products

Original Issue Date: July 11, 2025

Severity Rating: High

Software Affected

- Microsoft Windows
- Microsoft Office
- Microsoft Dynamics
- Browser
- Developer Tools
- SQL Server
- System Center
- Extended Security Updates (ESU) for legacy Microsoft products
- Azure
- Apps

Overview

Multiple vulnerabilities have been reported in Microsoft Products, which could allow an attacker to gain elevated privileges, obtain sensitive information, conduct remote code execution attacks, bypass security restrictions, conduct spoofing attacks, cause denial of service conditions or tamper with system settings.

Target Audience:
Individuals and IT administrators, security teams responsible for maintaining and updating Microsoft products

Risk Assessment:
Risk of remote code execution, system instability or sensitive information disclosure

Impact Assessment:
Potential compromise of system, exfiltration of data, ransomware attacks or system crashes.

Description

Multiple vulnerabilities have been reported in Microsoft Products, which could allow an attacker to gain elevated privileges, obtain sensitive information, conduct remote code execution attacks, bypass security restrictions, conduct spoofing attacks, cause denial of service conditions or tamper with system settings.

For complete list of affected products, CVEs, workarounds and solutions, refer to the Microsoft security updates.
